International Domestic Workers' Work and Life Balance in Taiwan and UK--Social Inclusion Perspective(I)

International Domestic Workers' Work and Life Balance in Taiwan and UK--Social Inclusion Perspective(I)

Overview	
Type	無
Identification	E10369en
Version	Production Date: 2017-03-15
Abstract	
<p>This research is to explore the current situation of worklife-balance (WLB) of migration domestic workers in Taiwan and the UK by taking social inclusion perspective, and to find the relevant factors that might be related to social inclusion and WLB. For example, the main type of living in the UK is out-of-employers' home, rather than Taiwan's live-in style. This research would love to see whether there is explanation of WLB difference between workers in the two countries. More importantly, we might also find valuable data related to the policy concern-- how to create opportunity for workers' inclusion and to introduce better policy and practice for the access of resources of migration domestic workers, including working environment, leisure, education, public community space and religion system, from the perspective of state intervention. This study can be a further reference of migration domestic workers' human right issue.</p> <p>The questionnaire is designed on the basis of Social Inclusion Matrix and "Work-Life Balance Scale", and is divided into three parts, namely, the physical and mental well-being; work-life balance; and social inclusion. The paper points out that the analysis of foreign care worker happiness and community integration, social participation and economic and social security have significant correlation, the main results are shown as:</p> <p>A. In the case of the other control variables, economic and environmental living conditions of foreign care workers largely affect their well-being and their work-life balance as well. Therefore, the focus of our government should be improving public facilities, enhancing housing quality, and boosting the security of living.</p> <p>B. Caregivers in the UK compared to those in Taiwan, treasure more on (personal) work-life balance than their well-being. Presumably, due to the form of license or adopt "live-out" system in the UK, the demand for social integration is not so significant an issue as in Taiwan.</p> <p>C. Compared between Taiwan and the UK, the feeling of work and life conflict is not the same. Therefore, when they face such conflict, the pressure they perceive and the wellbeing affected has an obvious gap. We can assume that the difference comes from whether they live together with the employer's family or not, as we have mentioned previously.</p>	
Kind of Data	抽樣調查資料 (Sample survey data)
Unit of Analysis	person

Scope & Coverage	
Time Period(s)	2014-2015
Countries	Taiwan, ROC
Geographic Coverage	
Taiwan UK	
Universe	
<p>At the time of the end of November, the total number of foreign workers of social welfare in Taiwan was 218,369, of which the number of nursing workers was 216,239, accounting for 99.20%. From the regional distribution, the number of foreign workers of social welfare in the northern part were 113,900 people, accounting for more than fifty percent, plus the central region and the northern region, accounting for about 97%. In terms of nationality distribution, the number of foreign workers of social welfare in Indonesia was 173,523, accounting for nearly 80%, followed by the Philippines and Vietnam.</p>
