Abstract	
<p>This survey aims to conduct random sampling survey by phone of Taiwanese population over the age of 12 of the household in 22 counties or cities in Taiwan, with 13,272 valid sampling completed in total.</p> <p>In order to infer the opinions of all the population over the age of 12, the survey is weighted based on the ratio of sex and age over the age of 12 in all the cities announced by Ministry of the Interior in July 2011. On the second phase, it is weighted and returns to the original condition based on the ratio of the population over the age of 12 in each city among the population over the age of 12 in all the cities.</p> <p>The Survey consists of three parts. first, the three dimensions of "information-access," "information-literacy" and "information applications" are discussed in order to determine differences in information-access and digital applications among the public; second, we consider the influences of the developing Internet on an individual's day-to-day opportunities; and third, individuals who do not yet participate in the information society are evaluated for their understanding of and attitude towards the Internet.</p>
