Abstract	
<p>This survey aims to conduct random sampling survey by phone of Taiwanese population over the age of 12 of the household in 22 counties or cities in Taiwan, with 26,702 valid sampling completed in total.</p> <p>In order to infer the opinions of all the population over the age of 12, the survey is weighted based on the ratio of sex and age over the age of 12 in all the cities announced by Ministry of the Interior in July 2006. On the second phase, it is weighted and returns to the original condition based on the ratio of the population over the age of 12 in each city among the population over the age of 12 in all the cities.</p> <p>The four study categories were formulated as follows: overview of individual use of computers and the Internet, overview of household use of computers and the Internet, basic individual information and basic household information. The individual digital divide was then measured by three primary dimensions, "access to information technology," "information literacy" and "information application," whereas the household digital divide was measured by two primary dimensions of "information environment in the household" and "information literacy of family members."</p>
