2013 Manpower Utilization Survey

2013 Manpower Utilization Survey

Overview

Type	Manpower Utilization Survey
Identification	AA020036en
Version	Production Date: 2014-10-20 v2

Abstract

The survey has been conducted every year since 1978 with an aim to gain understanding of manpower utilization in Taiwan Area, with results of the survey to enrich the data required by manpower research. The survey was done concomitantly with the Manpower Survey (originally called the Labor Force Survey) in May . In terms of contents, the survey this time was mostly the same as those in the preceding years. All civilian population aged 15 years and over, currently registering in ordinary household or institutional households, undertaking economic activities are included but those in military services or in prison are excluded. There are about 20,000 households(near 60,000 persons aged 15 and above) in these sampled households.

The Manpower Survey, used as a base, was supplemented with following data: (1) labor participation by married women; (2) income ,number of hours per week usually worked, duration of the present job, way to obtain the present job, and changing job of an employed person; (3) job opportunities and desired wage of a jobless person; and (4) supply of potential labor. Through face-to-face interviews, the sampled households are surveyed by well-trained interviewers who are recruited and assigned by local governments.

Kind of Data	抽樣調查資料 (Sample survey data)
---------------------	-----------------------------

Scope & Coverage

Countries	台灣
------------------	----

Geographic Coverage

Taiwan

Universe

The geographic scope of this survey covers Taiwan Province and 5 municipalities (Taipei City, New Taipei City, Taichung City, Tainan City and Kaohsiung City). All civilian population aged 15 years and over, currently living in ordinary household or institutional households, undertaking economic activities are included but those in military services or in prison are excluded.

Sampling

Sampling Procedure

(1) Sample design :

(a) Sample frames: the recent 1 year's TSUN/LIs household registration data file sorted by other register data.

(b) A two-stage stratified sampling is schemed to sample households for this survey : sample units drawn in the first stage of sampling are TSUN/LIs , while those drawn in the second stage are households.

(c) For first stage sampling, one must sort out with household registration data, the descriptive statistics of TSUN/LIs and then stratify TSUN/LIs according to the type of industrial structure, age and the level of education attainment. Each of 20 counties/cities in Taiwan Area is a single subpopulation for the stratification mentioned above.

(d) In the second stage, households are sampled inside TSUN/LIs drawn in the first stage conducted above.

(2)Sample size: Approximately 500 TSUN/LIs were drawn in the first stage of sampling and about 20,300 households were than sampled in the second stage, overall sampling fraction is 2.6%. There are near 60,000 persons aged 15 and above in these sampled households.

(3)Sample drawing : DGBAS conducted the first stage sampling. All TSUN/LIs were firstly stratified according to criteria proposed and then serialized them with their households numbers. After that, a serial number was randomly selected as a start point to sample TSUN/LIs systematically with a given span. A systematic sampling method was also adopted in the second stage which was conducted by the Office of Accounting and Statistics in local governments, the results of second-stage sampling was later handed to survey interviewers who were to compile respective sample frames.

(4)sample rotation : TSUN/LIs stratified for the first stage of sampling is categorized into 4 groups named as A,B,C and D. These groups are further chopped into 8 subgroups and then sorted as two packs(A1B1C1D1) and (A2B2C2D2) when one pack shift to another each year, three TSUN/LIs are drawn from each packed subgroup so that 12 TSUN/LIs available and are rotatively assigned to surveys in given year. It takes 4 months to exercise such rotation across subgroups in each pack so that each subgroup would be rotated 3 times. Generally speaking, January, May and September would be the months for group A (either subgroup A1 or subgroup A2 drawn); February , June and October for group B (either B1 or B2 drawn); March, July and November for group C (either C1 or C2 drawn): April , August and December for group D(either D1 or D2 drawn).From each TSUN/LI drawn in the first stage, two sets of households are sampled in the second stage. After consecutively surveyed for two months, the set of households would be alternatively shifted to another for next two months. After surveying for one year, the packed subgroups A1B1C1and D1 would be alternatively shifted to A2B2C2D2; and vice versa next year.

(5)handing of institutional households : The population of institutional households in TSUN/LIs last year is taken as the sample frame to draw persons in there for institutional portion of this survey later on.

Data Collection

Data Collection Mode	face-to-face interviews or telephone interviews
-----------------------------	---

Data Processing & Appraisal

Data Editing

CSR has checked wild codes and out-of-range values, to validate and clean data.
