III. Guideline for data validation and usage

1. CSR has checked wild codes and out-of-range values, to validate and clean data. There is no doubt about data accuracy after the validation.

2. The column widths of variable label and value description in the STATA are limited to 80 and 40 bytes, respectively, so the STATA dataset shows only the first 80 bytes as variable label, and the first 40 bytes as value description. In case of cut-off contexts, please see questionnaire.

3. Weighting:

Due to the increasingly high percentage of cell phone users, especially the younger Taiwanese, these people might be underrepresented in the samples collected through landline interview. To alleviate this problem, samples were collected through both landline interview and cell phone interview. As a result, the Telephone Interview data released include 711 samples from landline interview and 503 samples from cell phone interview.

The Telephone Interview data are weighted by raking method along with population distribution of sex, age, education, and area. The population parameters are referred to “2019 Demographic Fact Book, Republic of China”, published by Ministry of The Interior Republic of China.
